

Handheld Data Capture and Reporting

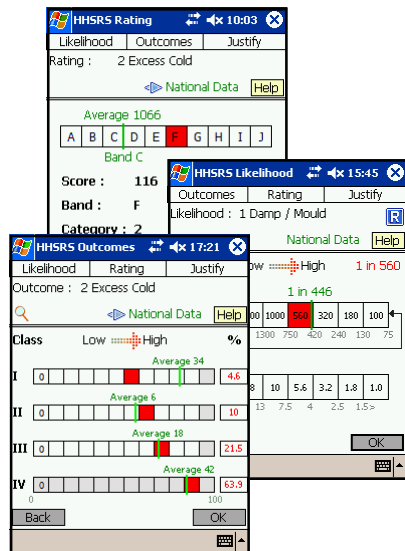

ProSurvey's handheld HHSRS assessment software is now available and provides a comprehensive system to guide even the least experienced user through an HHSRS assessment of a dwelling.

- Intuitive and easy to use for professionals
- Context sensitive help and information screens throughout
- Fully compatible with the ODPM guidance for rating hazards.
- Records full details of the surveyor, survey and property

ProSurvey HHSRS Provides online information for each hazard plus statistical background, ideals and other relevant matters for reference in the field and provides online guidance on ranges used in assessing likelihood and outcomes

Once the assessed likelihood and outcome for each class of harm against any or all hazards is entered the software produces Hazard Scores and Bands using the Hazard Formula.

ProSurvey HHSRS gives you the ability to include regional likelihood and outcomes averages to override the standard national data which is useful for example in a high radon area and includes full audit capability including, justification of likelihoods, outcomes and locations of hazards.

Available in two versions:

ProSurvey HHSRS

We are making this software available at a nominal price and it is aimed at the professional surveyor and environmental health officers carrying out HHSRS survey. Once collected results and data can be transferred to a PC for further manipulation using Microsoft Excel.

ProSurvey HHSRS Professional

Soon to be available is a full portfolio management suite around the main data collection tool to enable organisations to fully manage, validate and analyse their Health and Safety and Decent Homes obligations effectively.
